

## StarForce Corporate

Professional business software protection suite for applications with centralized management running on corporate networks.

Applications protected with StarForce Corporate can be distributed on any physical media or online.

With StarForce Corporate protected applications are controlled by a local network server.

Copies of the client application are installed on client network computers. The server application is installed on a network server and activated with the included License Server tool installed on the same server. The online activation process utilizes a serial number specifying licensing options for the protected application. This license defines the number of client application copies running simultaneously on the network, their total run time and other parameters. On startup each client application connects to the server requesting a permission to run.

License activation on the server is a one-off process performed by the network administrator, thus saving the precious time of other users.

StarForce Corporate is easy to install online using the free Protection Studio tool.

### StarForce Corporate supports the following software protection modes:

#### ➤ Physical media + Activation

Software is distributed using any physical media but will not run unless it is activated on an enterprise network server. In this mode a physical medium also functions as a secondary distribution tool when it is passed to new users who must activate the software for themselves or run it in trial mode prior to activation.

#### ➤ Download + Activation

Suitable for online software distribution. The software must be downloaded from the Internet.

## StarForce Corporate offers the following licensing modes:

### ➤ Buy only

Protected software must be activated to run.

### ➤ Trial

Protected software can be used without activation for a certain period of time. After the trial period expires the protected software will run only if activated.

### ➤ Lease

Protected software will run under a leased license for the duration of the lease term. After the lease term expires the protected software will run no longer and will request for license lease renewal.

### ➤ Subscription

Protected software will run under a subscription license for the duration of the subscription term. After the subscription expires the protected software will run no longer and will request for subscription renewal.

## StarForce Corporate features and benefits:

### ➤ Hack-proof software protection and use control

The software protection system is bound to the network server running the protected application with an appropriate license. The license defines the way the application runs on the network. Client applications connect to the server on a regular basis to obtain permissions to run.

### ➤ DRM features

- Serial number management, usage statistics and reports
- Software use and distribution control
- Software feature customization based on a license mode

### ➤ Personal "web office" for serial number management and sales statistics tracking

### ➤ Change distribution policy after software release

Customize protection settings for specific customers, change binding options from single-user to corporate and vice versa, etc.

### ➤ Specify software run time and the maximum number of simultaneously running client application copies (defined by customer)

### ➤ Integrated security solution including single-use and corporate modes

When used by a single customer, the security system binds a protected application to computer hardware running that application. When used in a corporate environment, the security system binds the protected application to a network server.

### ➤ Centralized protected application management on corporate networks

- Install several protected application copies on one server
- No additional hardware or software required to run a protected application (such as eToken)

### ➤ One-off installation and activation by network administrator saves users' time

### ➤ Server application deactivation

### ➤ 24/7 technical support

**StarForce Corporate comes in two flavors:**

- **Pro**  
Fully customizable protection for all types of software
- **Elite**  
Maximum protection for all types of software

## StarForce Corporate editions side by side

	Pro	Elite
<b>Protection options</b>		
Protection level	customizable	maximum
<b>Code obfuscation</b>		
➤ Function protection (export/import)	+	+
➤ Extra protection with hidden classes	+	+
Protection of unlimited number of files	+	+
Data files protection	+	+
Beta version and promotional copy protection	+	+
Patch and add-on protection	+	+
Activation of different application features according to serial number	+	+
GUI customization	+	+

Time Limited Protection Warranty	-	+

\*Additional charges apply

**Supported files formats:**

- Standard Win 32/64 executable files
- Standard Win 32/64 dynamic link library (DLL) files
- .Net applications
- Data files if called by protected application files directly
- Flash applications (executable and data files)
- Installer applications

\* *Encrypted and/or packed executable files are not supported.*

**Supported operating systems:**

- Windows 2000
- Windows XP 32/64-bit editions
- Windows Vista 32/64-bit editions
- Windows Server 32/64-bit editions
- Windows 7 32/64-bit editions

**StarForce Corporate system requirements:**

- Internet connection (broadband recommended)
